DETAILED ACTION

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "12" has been used to designate both a wall and a mounting plate. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The drawings are objected to under 37 CFR 1.83(a) because they fail to show sectional area A2 and area A1 as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be

Art Unit: 3749

removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities:

On page 3, line 7, change "form" to --from--,

On page 9, line 8, "hing" is unclear.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Riley et al (4,601,655) in view of DE (196 00 380 A1)**. Riley et al discloses an apparatus in which a gas and oxygen are introduced through fuel line (8) and oxygen supply line (5) (from oxygen enriched air which is well known in the art to be at least 80% oxygen) and are mixed and combusted downstream of outlet (9) producing a

flame, exhaust gases are recirculated until the flame temperature reaches a desired level (SEE Figure 9) and hence is maintained. The teaching of gas being supplied at supersonic velocities is optionally disclosed in column 6 by the teaching of an ejector device which uses the oxygen supply to accelerate the exhaust gases. Riley et al does not teach a second (secondary) recirculation of recirculating exhausts from a flame to an oxygen-exhaust-fuel mixture. DE '380 A1 discloses a burner wherein in the same way as Riley et al, the exhaust gases are recirculated back to the flame for lowering the temperature of the flame and an additional recirculation of exhaust gas back into the mixture. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the burner of Riley et al by including the additionally recirculation step as taught by DE '380 A1 for the purpose of reducing NO_x emissions and providing high efficiency heat treatment.
